

APPLICATION SUMMARY

Application number	APP202019
Application type	Non-Notified, Import or manufacture in containment,
Applicant	The New Zealand Institute for Plant & Food Research Auckland Mail Center Private Bag 92169 Auckland 1142
Purpose	To import and manufacture Plant and Food Research Experimental Plant Protection Compounds for use as pesticides and plant protection compounds on various crops.
Date formally received	27 January 2014

Application summary prepared by The New Zealand Institute for Plant & Food Research

This is a generic application to import and manufacture experimental plant production compounds. The intention is to conduct contained laboratory, field and glasshouse trials to provide information relevant for the development of these compounds. Substances to be trialled will include insecticides, fungicides, herbicides, plant growth regulators, plant activators, insect semiochemicals and other plant production compounds. Contained trials will be carried out on research orchards, privately-owned properties, or publically-accessible sites (semiochemical trials only).

The containment practices proposed within this application are designed to contain the compounds and manage any hazards and risk. These include secure storage, safe transport, appropriate labelling and signage, control of spray drift, limiting use of treated produce, use of trained staff and notification of trial conditions to property owners/managers and limiting access to trial sites. For semiochemical trials in publically-accessible areas, access restrictions, publicity and signage will be jointly agreed with the relevant local territorial authority or other administering body and the application and will depend on the location and scale.

Details of the substances will be notified to EPA before commencement of the trials.
