Subject: Waiver of the deadline for the reassessment of methyl bromide

Categories: Copied to SharePoint

Good afternoon

Rockit Global, Rockit Trading and Rockit Packing Company supports the application for a waiver to the requirement to apply recapture technology to methyl bromide fumigations to 28th October 2021.

In April 2021 the New Zealand apple industry will be part way through its export year, which runs from March through to August, and will therefore be approximately only 40% through the fumigations. Customers are currently placing orders with exporters, and the current date of 28 April creates uncertainty and a lack of confidence in the New Zealand supply. The date of 28th October will allow the New Zealand apple industry to complete all fumigations and fulfil orders for the season, and plan accordingly for the 2022 season.

Kind regards,

Sarah Duncan
