

Staff Assessment Report - Correction

APP203875

An application to import and release two biological control agents to control German and common wasps.

Purpose	To release two parasitoids, <i>Metoecus paradoxus</i> and <i>Volucella inanis</i> , as biological control agents for the invasive German and common wasps (<i>Vespula germanica</i> and <i>V. vulgaris</i>).
Application number	APP203875
Application type	Notified, Full Release
Applicant	Tasman District Council
Date formally received	14 September 2020

The following two minor errors in the Staff Assessment Report are corrected:

- §70 : Host-specific parasitoids tend to **share** similar life-history traits with or exist in a common habitat.
Should be: Host-specific parasitoids tend to **target species sharing** similar life-history traits with or exist in a common habitat.
- §216: The benefits to Māori associated with this application are **unlikely** to outweigh any detrimental impacts to Māori.
Should be: The benefits to Māori associated with this application are **likely** to outweigh any detrimental impacts to Māori.
