Field test GMF99005 - Annual Report to EPA

Purpose of field test

To field test *Pinus radiata* and *Picea abies* plants genetically engineered for herbicide resistance.

This report relates to control 7.4 in the field test approvals for GMF99005.

1 The continued viability of the project

The contained field site in Rotorua continues to be a viable site for the study of genetically modified trees.

There are currently no genetically modified trees or cuttings planted on the field site under this approval.

2 Interference with the trial

There has not been any interference with the trial.

3 Plan of activities for the coming year

There is no plan to plant trees under this approval during the next 12 months.

4 Records of any precocious reproductive structures found

There have not been any GM trees on the site under this approval.
