

Erratum: Ngaruroro Water Conservation Order

There is a small transposition error in the signed report of the Special Tribunal dated 30 August 2019.

At Schedule 4 of the report (Water Quality Limits) page 64 the limit for dissolved inorganic nitrogen for the right hand column (Upper Ngaruroro Waters upstream of Whanawhana) the 5 year median concentration value should not be "0.025mg/L" but should be "0.05mg/L".

All members of the Special Tribunal concur that this is a transposition error and that the correct determination was as stated above.

Dated: 2 October 2019
