

**HAVE YOUR
SAY** 

This is a call for information

Glyphosate

A weedkiller commonly used in

NZ since the
1970s

Active ingredient
in many consumer
and agricultural
products

Safe to use if you follow the instructions

Used by home gardeners, farmers, and councils

Why we are asking for this information

There is ongoing public debate about the effects of glyphosate on the environment and people's health.

Glyphosate is currently approved for use in the EU until 15 December 2022. That approval is now being reviewed, with a decision due in mid-2022.

It's a first step

This call for information is the very first step in understanding how glyphosate is currently used in New Zealand.

Read about the process:
epa.govt.nz/chemical-reassessments

Information we are asking you

We want to find out from industry, professional users and communities.

- How glyphosate products are being used
- What glyphosate products you use
- How you use them
- What you do to reduce the risk when using them
- Impacts on Māori
- Benefits and alternatives to glyphosate
- Impacts and risks to health, environment, and economy
